How would you describe your overall internship experience during your final year of faculty?

My internship experience at the Accelsiors Student Research Hub was incredibly rewarding and full of learning opportunities. It allowed me to gain real-world insights into clinical trials. I worked closely with experienced professionals, which accelerated my learning and gave me a better understanding of the inner workings of the Medical Monitoring Unit.

What were your main responsibilities during your internship, and how did they align with your expectations?

My main responsibilities included maintaining study-specific medical/safety logs and trackers, reviewing laboratory findings, assisting with eligibility verification, and documentation filing. These tasks aligned with my expectations in terms of providing hands-on experience in clinical trial management and medical monitoring.

How did the internship help you develop new skills, both professionally and personally?

Professionally, the internship helped me develop critical skills in project management. I learned how to efficiently manage timelines, communicate with different teams, and ensure the accuracy of clinical data. Personally, I developed better organizational skills and learned how to prioritize multiple tasks under pressure. Additionally, working in a collaborative environment helped me improve my teamwork and communication skills, which will be invaluable in my future career.

How did you manage the demands of your internship while keeping up with your final-year studies?

Balancing the internship and my final-year studies was challenging, but I learned to manage my time effectively. I dedicated specific hours of the day to my studies and made sure to stay organized. I also communicated openly with my internship mentors about my academic commitments, which helped me avoid overwhelming workloads. This experience taught me the importance of planning ahead and maintaining a structured routine.

What advice would you give to current students who are about to start their internship or who are looking for one?

I would advise students to be proactive in seeking out learning opportunities and practical knowledge, and the Accelsiors Student Research Hub is a great example of one. For students who are about to start their internship, my advice would be to stay organized from the start. Make sure you understand your responsibilities clearly and do not hesitate to ask for help when needed. Internships are a learning experience, so take advantage of the opportunity to ask questions and gain new skills.

If you could go back and change one thing about your internship experience, what would it be?

I would not change anything. It was a wonderful experience with exceptional mentors and a supportive team.
